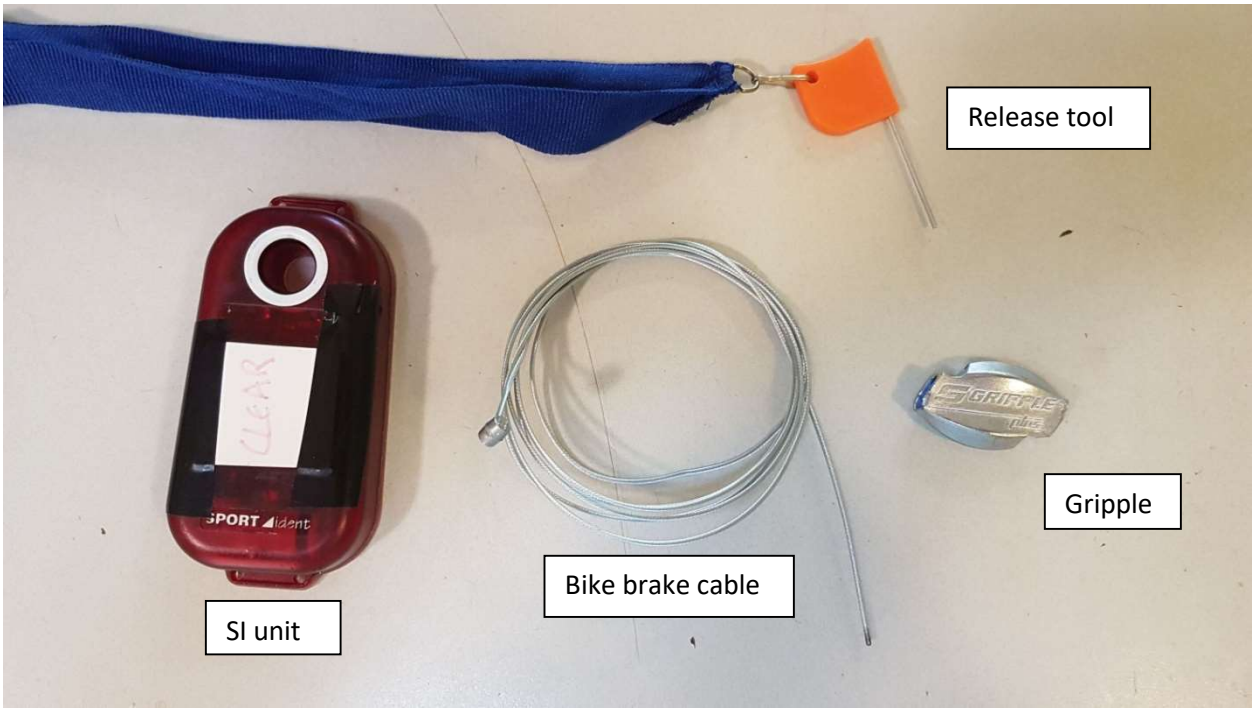
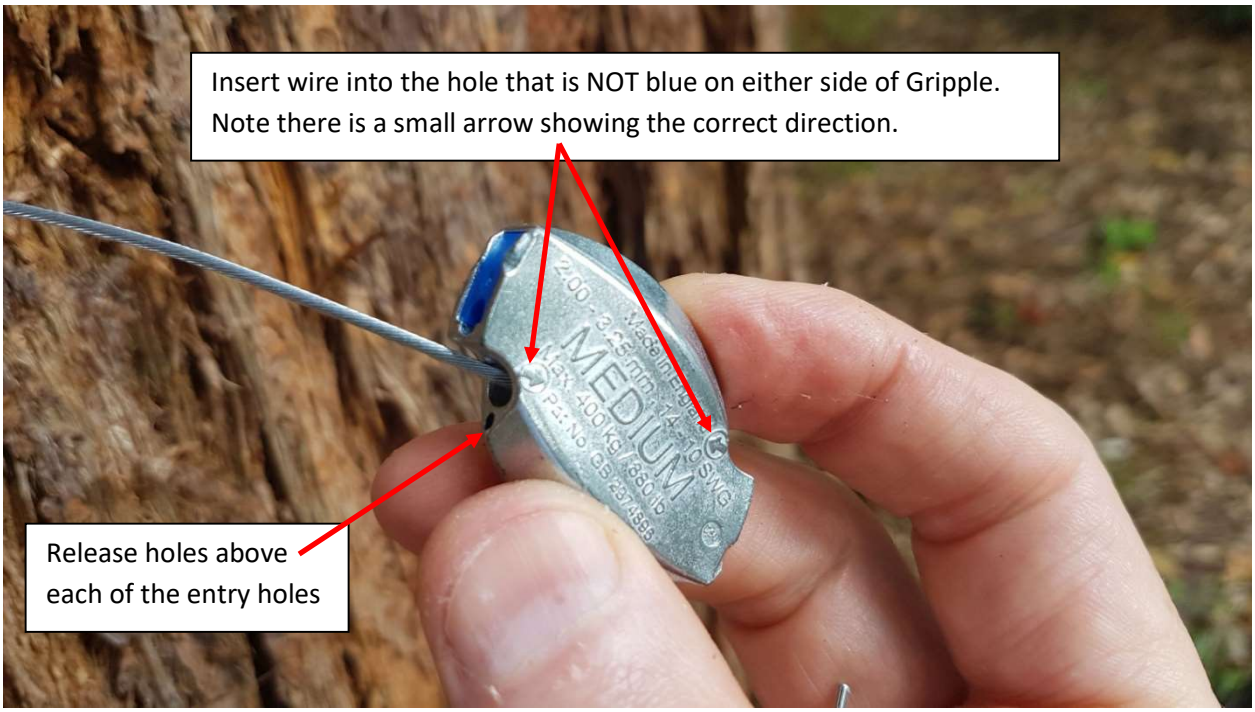
Big Foot Orienteers

ripple" installation instructions and examples

Basic equipment for a single control.



A "Gripple" is a fitting that is a one way gripper on a cable. It can be slipped onto a cable in one direction and can only be removed again by inserting the Release tool.



Installation

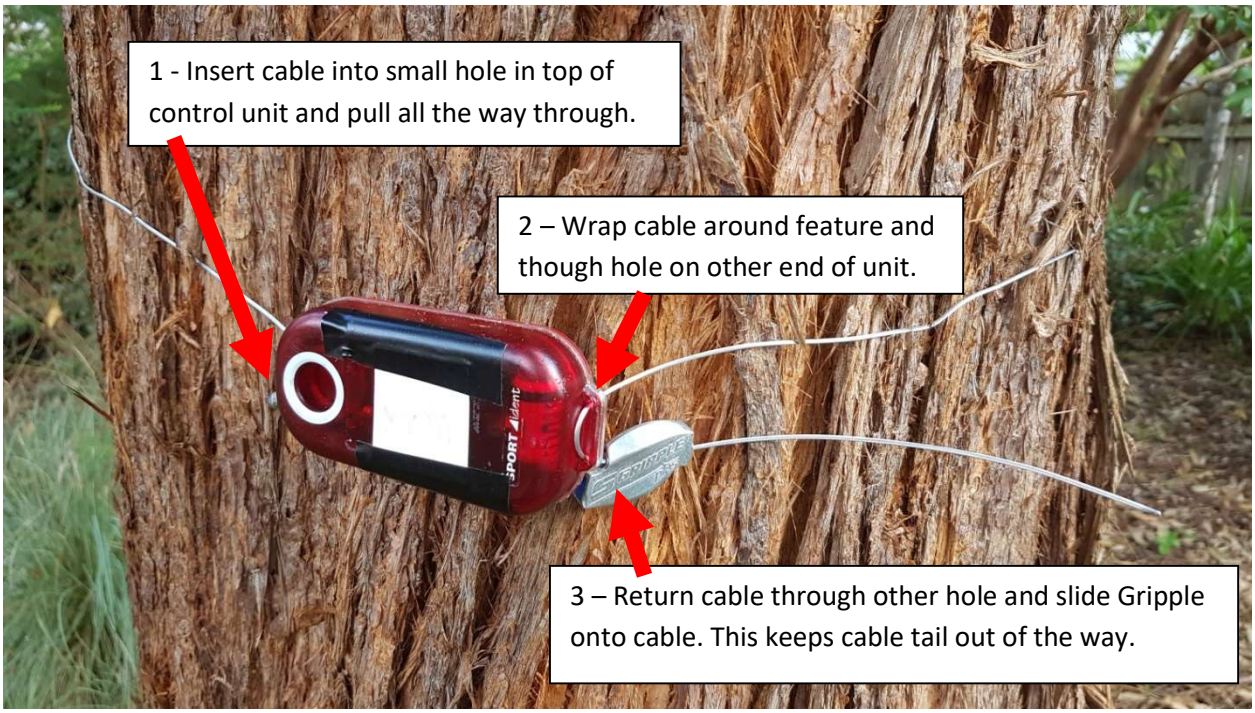
ripple" installation instructions and examples



Removal

Insert release key into hole and push to release gripper. It will then slide off the cable.

Sometimes it can be a bit stiff and you might have to try a couple of times. (May be frustrating when it is getting dark/being bitten by mozzies /are in a hurry!)

Sample installations:

TIP – Wrap cable around feature as many times as possible to minimise length of tail.

If you have a particularly large feature you can feed 2 cables through the unit and use both holes in a single Gripple.
